

JOSHUA TEVERA

Software Engineering Student | Full-Stack Developer

Harare, Zimbabwe | joshuatevera@gmail.com | +263 777 056 234 | [Portfolio](#) | [GitHub](#)

PROFILE

Result-driven Software Engineering student with proven hands-on experience delivering production-ready web applications across healthcare, e-commerce and education domains. Proficient in full-stack development using Django, Node.js, React and React Native, with a strong focus on RESTful API design, AI system integration and database-driven platforms. Demonstrates the ability to contribute meaningfully to engineering teams through clean architecture, collaborative workflows and a consistent drive to build solutions that address real-world problems.

TECHNICAL SKILLS

Languages	Python, JavaScript, Java, HTML, CSS
Frameworks	Django, Django REST Framework, Node.js, Express.js, React, React Native
Databases	SQLite, MySQL, Firebase, PostgreSQL
Tools & Platforms	Git, GitHub, Docker, Postman
Domain	Full-Stack Web Development, RESTful API Design, AI Integration and mobile apps.

PROJECT EXPERIENCE

Echo --- Anonymous AI Sexual Health Decision Simulator *Personal Project*

Django · React · Vite · Tailwind CSS · Google Gemini API

- Built a stateless, login-free mobile-first web app helping university students navigate sensitive sexual health decisions privately and without stigma.
- Integrated Google Gemini AI to simulate two realistic outcome paths per scenario and deliver one clear, actionable recommendation.
- Designed a deliberate no-authentication, no-data-storage architecture as an ethical product decision, not a technical limitation -- demonstrating design thinking beyond code.
- Surfaced contextual local clinic recommendations within the AI response flow, bridging digital guidance and physical healthcare access.
- Delivered a fully decoupled Django REST API backend with a React/Vite frontend, with environment-separated configuration for local and production deployment.

Meet the Doctor Online --- AI Healthcare & Booking Platform *Personal Project*

Django · Django REST Framework · Python

- Designed and built a healthcare platform enabling users to consult an AI-powered virtual doctor for preliminary health guidance before booking a real appointment.
- Engineered backend APIs covering session management, user authentication and appointment scheduling with medical professionals.
- Improved access to healthcare services by combining virtual AI assistance with a streamlined real-doctor booking workflow.

AI Programming Grader --- Backend Lead *Team Project (5 members)*

Django · React · Django REST Framework · JWT · Google Gemini API

- Led backend engineering for an automated Python code assessment platform built by a cross-functional team of five developers.
- Designed the full database schema, implemented JWT-based role authentication and integrated Google Gemini API for real-time, personalised student feedback.
- Coordinated development via Git feature branches and weekly sprint cycles, maintaining high code quality and a structured collaborative workflow.
- Delivered a system that automates manual code evaluation, detects plagiarism through similarity analysis and accelerates the student feedback loop.

Full-Stack E-Commerce Platform with AI Integration *Personal Project*

Django · React · TypeScript · PostgreSQL · Google Gemini API · Docker

- Built a fully functional online store with user authentication, a shopping cart and integrated payment processing.
- Embedded the Google Gemini AI API to automatically generate dynamic, context-aware product descriptions.
- Developed a responsive React/TypeScript frontend and a scalable Django REST API backend with JWT authentication and a comprehensive admin dashboard.
- Containerised the full application with Docker, ensuring environment parity across development and production.

EDUCATION

Bachelor of Science in Software Engineering — *Expected 2028*

University of Zimbabwe | Level 2 | Currently Enrolled

ACHIEVEMENTS & INVOLVEMENT

- Delivered real-world AI and full-stack projects spanning healthcare, agri-tech and e-commerce domains, demonstrating cross-industry engineering impact.
- Maintained consistent hands-on engagement with modern web technologies and REST-based architectures beyond formal academic requirements.
- Actively builds production-grade systems independently to develop industry readiness and a portfolio that reflects genuine engineering capability.
